FOR IMMEDIATE RELEASE

Instanet Solutions Raises the Bar on Faxing Solutions
Numerous New Faxing Functions Set for Release

AUSTIN, TX – September 22, 2009 – Instanet Solutions announced today that it is ready to release several new faxing related features for its DocBox™, InstanetFax™ and TransactionDesk™ services. These, exciting features give Instanet Solutions' customers and users significant new functionality, including some not found in any competing online system for real estate users.

Email to fax - allows users to email documents from their own email client (e.g. – Outlook) to a single or multiple fax numbers.

Print to Fax/Email/Upload – Instanet Solutions has developed a special Windows based print driver so any document can be 'printed' to either multiple fax numbers, multiple email addresses or uploaded directly into the inbox for DocBox or an existing transaction folder within TransactionDesk or DocBox.

Mobile Print to fax– leveraging the stand alone email to fax function, users can 'print' documents to any fax machine from their mobile device/PDA.

Personalized Vanity fax numbers – These personal fax numbers enable users to receive faxes at a personal number of their choice, which they can print on their business cards. Users will have the ability to select and purchase their own fax number from a pool of available numbers in their area code. Faxes received using the new personal fax number will also be sent into their DocBox accounts without the use of a fax coversheet, creating a unified faxing/document management solution without the need for routing cover sheets.

Offline Intelligent Fax Coversheet – users can create and print a 'fax to email' and/or 'fax to fax' coversheet without having to go online and logging into the system, simply by using the intelligent PDF file coversheet saved to their desktop. Also new is the ability to send multiple documents in one transmission. Using the intelligent fax coversheet users can send up to four documents in one job. The service will divide the single fax into as many as four separate PDF documents, each with a user provided document name.

Something all of these new features have in common is that they are all accessed from outside of the application without the need to login directly to the interface. This gives users more ways to leverage the system and work more efficiently.

All of these features will be available to Instanet Solutions customers with DocBox, InstanetFax or TransactionDesk as a subscribed service. Personal Vanity fax numbers will be an extra charge to end users and will be available through the Instanet Solutions online store, all other new features will be included with the platform at no extra cost.

"We are accelerating our product development efforts and will be rolling out many significant new features over the coming months," says Joe Kazzoun, vice president of business and product development at

Instanet Solutions. "We want our customers and users to have the very best tools available; and we want to make it even easier for prospective clients to choose our platform."
